

Limiting global warming to 2° Celsius will require trillions of dollars of annual investment in green growth. Two thirds of investments required will be in emerging markets that need to build new climate-proof infrastructure and other investments. GreenInvest is hosting a high-level event in conjunction with the 2015 Annual Meetings of the Boards of Governors of the World Bank Group (WB) and the International Monetary Fund (IMF) in Lima, Peru. The event is supported by:

- The German Federal Ministry for Economic Cooperation and Development (BMZ)
- European Commission
- Inter-American Development Bank (IDB)
- Global Green Growth Institute (GGGI)
- Climate Bonds Initiative (CBI)
- Institutional Investor Group on Climate Change (IIGCC)
- Climate Policy Initiative (CPI)
- United Nations Environment Programme Inquiry (UNEP Inquiry).

The event is aimed at institutional and other private sector investors who are interested to further explore green investment opportunities in emerging markets. It will include presentations from senior level speakers; a profile of green investment opportunities as identified by the EIB, IDB, KfW and other development banks; and a focused workshop to identify recommendations and actions to remove barriers to inclusive green growth. The event provides a unique opportunity for institutional investors and other private sector investors to share their knowledge and experience regarding green investment opportunities and to ensure investments suit their risk-return requirements. The action-focused event will do this by connecting investors with public sector institutions, including governments and development banks, around a dialogue about green investment opportunities in emerging markets. Emerging market governments and development finance institutions, including the European Investment Bank and KfW, will present exemplary green projects, funds and other instruments. Institutional investors will have a dialogue with development banks and governments on what risk-bridging is required from the public sector to allow investors to increase their allocation of capital to this pipeline of green investments. The output from the Risk and Barrier Mapping workshops will contribute a report being developed by GreenInvest that will be presented at the Paris COP.
